# Sentry 48DCWB-04-2x 100 -DONB 

## Key Features

> Remote Power Management: Combine intelligent power distribution and remote power control into a single 2U 19" rack-mount enclosure
> Input Power Feeds: Two (2) 100-amp inputs to support dual power supply servers and networking gear
> Outlets:Two (2) high-amp (to 70A) individually fused outlets per input power feed
> IP Access \& Security: Web interface, SSL, SSH, Telnet, SNMP, FTP, SNTP, Syslog, LDAP(S), TACACS+, RADIUS, and RS-232 access
> Expansion: Add an expansion PDU (48DCXB) to a master PDU (48DCWB) for additional monitoring and management under the same IP address
> Environmental Sensors: Add two (2) probes on 10ft leads that each measure temperature and humidity

## Intelligent -48 VDC Power Distribution, Remote Management, Power \& Environmental Monitoring

The Sentry 48DCWB-04-2X100-DONB Intelligent PDU and Remote Power Manager minimizes the impact of locked-up routers, servers and other network devices on business-critical networks. CLECs, ILECs, ISPs and enterprises use the Sentry 48DCWB-04-2X100-DONB to manage equipment in remote sites, co-location facilities and network operation centers. Sentry 48DCWB-04-2X100-DONB eliminates the need to dispatch a field service technician for manual intervention when devices lock-up. Using a Sentry 48DCWB-04-2X100-DONB, the network operations center can quickly restart locked-up remote network servers to ensure that the network is fully operational around the clock.

Sentry 48 VDC provides immediate operational cost savings, including:
> Reduced field service visits
$>$ Improved problem/solution response time
> Improved network availability > Improved facility security

## Eliminate the Need for a Separate Power Distribution Panel

The Sentry 48DCWB is an intelligent unit that combines the functions of a power distribution panel and remote power management unit into a $2 \mathrm{U} 19^{\prime \prime}$ rack-mounted enclosure. Each power output terminal connection is rated to switch 70 amps and is protected by interchangeable TPC fuses allowing for the current rating to be adjusted onsite.

## Measurement Features

Use RS-232 and/or TCP/IP to monitor the status of key measurement values. Receive SNMP or email alerts as well as Syslog when a measurement value is out of a predefined threshold:
> Input Feed/Outlet "On Sense" - Verifies power at each power input/outlet connection.
> Load Sense - Provides an accurate, real time measurement of the current draw, in
amps, for each power outlet.
> Environmental Sensors - Supports two external probes that each measure temperature and humidity.
